

Medical Devices

Invention and creativity in the rapidly growing field of medical devices represent a unique and exciting blend of electronics, chemistry, bioengineering, biology, and materials science. New devices continue to enter the marketplace, creating more competition and a need for strong intellectual property protection.

COJK's attorneys use their knowledge of law, science, technology, and related industries to effectively counsel clients in the medical device industry. Our team has the deep and diverse training to counsel clients in this fast-changing and interdisciplinary field. We work closely with executives and entrepreneurs, as well as engineers and scientists, to protect and maximize the value of their innovations. We assist clients with the preparation and prosecution of patents; with opinions of patent validity, patent infringement, and patentability; and with IP transactions, including manufacturing and supply agreements, asset purchase agreements, licensing agreements, and related due diligence.

COJK attorneys have experience with the following technologies in the medical device field:

- Ultrasound imaging and therapies
- Catheters, steerable and non-steerable
- Devices and coatings
- Diagnostic devices, components, and systems
- Imaging equipment, methods, and systems
- Medical devices and instruments
- Prosthetics, implants, and joint replacement
- Treatments for disease and medical conditions
